Alcohol and the law
In Australia it’s illegal to supply alcohol to anyone under the age of 18. If you are caught selling, supplying or buying alcohol for someone under 18 you may face legal action.

It is also illegal in Victoria to supply alcohol to someone who is under the age of 18 without their parent or guardian’s permission – even if it’s on private property including your home.

Alcohol and pregnancy
Drinking alcohol during pregnancy can be harmful to your baby, so the best option is not to drink.

If you drink while pregnant, it may cause:
- Miscarriage
- Stillbirth
- Premature birth

Alcohol may also cause your baby to be born with Foetal Alcohol Spectrum Disorders (FASD).

This means your baby may be born with:
- Low birth weight
- Attention and/or learning difficulties
- Facial abnormalities
- Damaged heart, kidneys, and other organs

Not many babies in Australia are born with FASD, but there are more born to Aboriginal and/or Torres Strait Islander people than to non-Aboriginal Australians.

Giving up alcohol
If you want to give up alcohol, but have been drinking regularly for a long time, your body has to get used to working without it. This is why you may experience withdrawal symptoms. The symptoms usually start about four to twelve hours after the last drink and can last for about four to five days.

Symptoms include:
- Sweating
- Tremors
- Nausea
- Anxiety
- Seizures or fits

It’s important to ask for medical help to get you through withdrawal safely.

If you, a family member, or a friend want ‘Help and support’ turn to the back page.

Help and support

DirectLine  
Tel: 1800 888 236  
24 hours, 7 days a week  
Confidential AOD counselling and referral line

Alcohol

Street names
Booze, grog, piss, liquor, charge, nip.

Effects of alcohol
Alcohol affects everyone differently, but you may experience:
- Feeling relaxed
- Trouble concentrating
- Slower reflexes
- Increased confidence
- Feeling happier or sadder, depending on your mood

If you have a lot, you may also experience:
- Confusion
- Blurred vision
- Clumsiness
- Offensive and violent behaviour
- Memory loss
- Nausea and vomiting
- Passing out
- Coma
- Death

In an emergency
Call triple zero (000) if someone looks like they’ve had too much alcohol and are in trouble. Passing out is a sign that someone may overdose and in extreme cases can lead to death. Ambulance officers don’t have to involve the police.

While you wait for help to arrive:
- Stay with the person and keep crowds back
- Make sure they have enough air and loosen tight clothing
- If they lie down, put them on their side in case they vomit

Hangovers
If you drink a lot, the next day you may experience a hangover including:
- Headaches
- Diarrhoea and nausea
- Tiredness and trembling
- Increased heart rate and blood pressure

Sobering up
To sober up takes time. The liver gets rid of about one standard drink an hour. (Standard drinks are demonstrated below.) Sweating it out with exercise, cold showers, coffee, fresh air and/or vomiting will not speed up the process. They may make you feel better, but they don’t get the alcohol out of your blood quicker. This means it may not be safe for you to drive or work the next day.

Standard drinks
Light beer - 2.7% alcohol
- One 375ml can or stubby equals 0.8 standard drink

Mid strength beer - 3.5% alcohol
- One 375ml can or stubby equals 1 standard drink

Full strength beer - 4.8% alcohol
- One 375ml can or stubby equals 1.4 standard drinks

Wine - 12% to 13% alcohol
- One 100ml serve equals 1 standard drink
- One 150ml (average pub) serve equals 1.5 standard drinks
- One 750ml bottle equals 7.5 standard drinks

Spirits - 40% alcohol
- One 30ml shot equals 1 standard drink
- One 700ml bottle equals 22 standard drinks

Premixed spirits - 5% alcohol
- One 375ml can or bottle equals 1.5 standard drinks

If you are unsure how many standard drinks your drink contains check on the label or ask the bar tender. If you’re at someone’s house pour your own drinks.

Mixing alcohol with other drugs
The effects of drinking and taking other drugs – including over-the-counter or prescribed medications – can be unpredictable and dangerous.

Alcohol + Cannabis = nausea, vomiting, panic, anxiety and paranoia.

Alcohol + Energy drinks (with caffeine), Ice, Speed or Ecstasy = more risky behaviour, body under great stress, overdose more likely.

Alcohol + GHB or Benzos = decreased heart rate, overdose more likely.

Responsible drinking
While there is no safe level of drinking, the National Health and Medical Research Council has developed a set of guidelines to help you drink responsibly. If you are healthy (and not pregnant or under 18), the guidelines recommend:

- No more than two standard drinks a day to reduce long term harm to your health.
- No more than four standard drinks on any one occasion (for example at a party) to avoid injuring yourself or other people.

If you are drinking, it’s a good idea to:
- Drink low alcohol drinks
- Eat before and while you are drinking, but avoid salty snacks
- Pace yourself
- Alternate between alcoholic and non-alcoholic drinks
- Keep track of the number of standard drinks you’ve drunk
- Don’t be pressured into drinking more than you want to
- Avoid sitting around and drinking for a long time – stay busy
